

The Bukkehave team is your partner for vehicle fleet solutions in emerging markets

Who do we serve?

International companies in the transport industry

What do we offer?

Purpose-built solutions

Where do we operate?

Emerging markets

When is the best time?

Right now

Why do we do all this?

We possess the right mix of knowledge, desire, experience, capability and resources

Serving transporters and designing logistics solutions in the developing world

With over 85 years of experience in delivering trucks, vehicles and heavy equipment to commercial enterprises and international organizations in the world's most remote areas, we know the importance of a reliable transporter. After all, in the past five years we have established service facilities in a variety of different continents and countries and delivered more than 17,000 units of equipment into more than 120 countries. From the Hides in Papua New Guinea to Kome in Chad, our experience has sharpened our expertise, giving us an unparalleled ability to provide value to international transporters operating in challenging terrains.

What are some of the challenges transporters face in the developing world?

Infrastructure and logistics in places like Africa, Papua New Guinea and Oceania is significantly different than in North America and Europe. Long haul is truly long haul – Africa is larger in area than the United States, China, Western Europe and India combined. And while many of the large corridors are tarmac roads, the reality is that trucks spend the vast majority of time driving on dirt roads with potholes, where rainy seasons and steep climbs and descents make the operating conditions very harsh. The distances are long, the conditions tough and sometimes a 1000-mile round trip takes two weeks. Ensuring that the trucks are in excellent operating condition, with the right spare parts available and properly trained drivers are some of the challenges we usually face when designing a transportation solution for transporters. We also know that other important factors to take into account include the choice of tires, fuel consumption and the whereabouts of the trucks.

Monitoring and optimizing fuel consumption

What does Bukkehave offer transporters and freight forwarders in the developing world?

Bukkehave offers purpose-built solutions for the vehicle fleet needs of transporters in remote areas of the world. In collaboration with the client, we simulate transportation patterns, analyze mileage and road conditions, and forecast anticipated spare parts consumption. We establish service facilities and consignment stock at the client's sites or at strategic locations, deliver service schedules for the trucks and provide training for mechanics and drivers. We consider a variety of different options and take national weight/road restrictions and loading capacity into consideration before we decide on the right truck and trailer configuration.
